

Liquid Allograft

PROTOCOL

Standard Recommended Individual Injection Dosage:

- Large joints (knees, hips): 1 - 2cc or more, depending on physician recommendation
- Smaller joints (wrists, ankles): 0.5 - 1cc or more, depending on physician recommendation
- Soft Tissue (including neuropathy and plantar fasciitis): 1cc or more, depending on physician recommendation

Recommended Usage Protocol:

- Patients with less severe injuries – Single injection
- Older patients with less severe injuries – Twice the dosage size, single injection
- Chronic or advanced injuries – series of three injections, spaced 2-7 days apart
- Older patients with chronic or advanced injuries – series of three injections at twice the dosage size, spaced 2-7 days apart

Usage Instructions:

- Keep frozen at -20 C until ready for use in a standard office freezer
- Remove from freezer 5-10 minutes before procedure
- **Do not dilute** or mix with any other product
- **Do not mix** with PRP due to it being pro-inflammatory and would decrease the effectiveness of RegenaMax
- **Do not mix** with Prolotherapy, Bone Marrow Aspirate, or Fat Injections with SVF
 - This includes glucose or similar substances
- Product can be administered with a 30g needle
